

Specifications and Options

LORRY LOADER CRANE

Ceejay Systems (SV) Ltd is a distributor for the Fassi range of lorry loader cranes. The standard crane fitted in combination with a 6 to 10 ton capacity slide bed is a 17 tm with either 3 or 4 extensions on an 18 to 26 ton chassis. This gives you a lift capacity that is useful at full reach or retracted. Optional radio remote control and extra control functions are available at extra cost.

The pump is upgraded on the conversion to a bent axis piston pump to cater for the 4500psi pressure requirement of the crane.

The crane subframe purposely designed to integrate into the slide bed subframe. Particular attention is paid to keep the body height as low as possible.

Various car lifting frames are available up to 3000kg capacity with continuous rotating and hydraulic levelling. Also available are a range of lifting straps, clamps and hublifters to meet your requirements.

Typical crane capacity

Model F170 A24

3360kg @ 4.45m

2260kg @ 6.25m

1640kg @ 8.2m

1275kg @ 10.2m

1005kg @ 12.3m

Chassis sizes suitable 15 to 26 ton

CRANES WITHOUT COMPROMISE

The Fassi range of cranes starts with the micro at 1tm to the huge 150tm with 8 hydraulic extensions. This is probably one of the most technically advanced and reliable cranes on the market today with over 5,000 manufactured per year sold to a global market.
